> Features of IL03 Series

IL03 series is an economical energy-saving and flexible application scenarios street light/area light with high-cost performance.

- Power range: from 20W to 290W.
- Streamlined fixture body design, industrial-level design standards.
- Micro-lens systems produce IESNA Type II, Type III, Type IV and Type V distributions.
- Luminaries produces 0% total lumens above 90° (BUG Rating, U=0), provides uniform light output with a lower glare.
- Optical systems maintain an IP66 rating.
- The top spot of the fixture is reserved for the sensor in the case of future installation.
- A variety of brackets can be selected, easy to quickly match a variety of lamp posts, worry-free installation.

> Photometric Design

- Optimized, premium optical grade Mitsubishi polycarbonate lens, the efficient design of the modules make each light engine highly customizable, allowing the light distribution to be aimed toward the application.
- Optical systems allow for versatility, tight cutoffs, and flexible control for a wide variety of applications.
- We deliver innovation and customization, further expanding the flexibility of the project. Exceptional uniformity and low glare for maximum comfort and neighbor-friendly.

Distribution Type

TYPE II (T201)

Asymmetric, Type II can be used in long and narrow aisles/lanes/sidewalks.

TYPE III (T301)

Asymmetric, Type III can be used in wide road parking areas, or at corner areas.

TYPE IV (T401)

Asymmetric, Type IV can be used in wide road parking areas, or at corner areas.

TYPE V (T501)

Symmetrical, T5 is suitable for use in the central area of the car park, or in road intersection areas

Lumileds 3030 LED chip

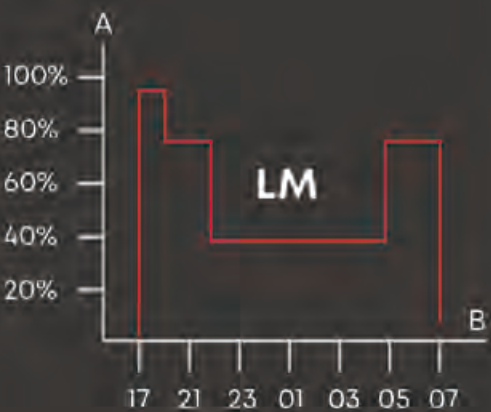

The photometric engine takes advantage of the latest generation of mid-power LEDs and dedicated optics for professional applications. Combined with Lumileds 3030 it provides an alternative solution for those who are looking for very cost-effective yet efficient lighting while keeping the same luminaire design.

> Control Systems

Custom Dimming Profile

Intelligent luminaire drivers can be programmed with complex dimming profiles. With customized combinations of time intervals and light levels are possible. This feature does not require any extra wiring.

The period between switching on and switching off is used to activate the preset dimming profile. The customised dimming system generates maximum energy savings while respecting the required lighting levels and uniformity throughout the night.

Daylight Sensor / Photocell

Photocell or daylight sensors switch the luminaire on as soon as natural light falls to a certain level. It can be programmed to switch on during a storm, on a cloudy day (in critical areas) or only at nightfall so as to provide safety and comfort in public spaces.

A sensor mounting hole is reserved on the top to facilitate future installation.
